Release Notes - 2.20.01

Changes made in this release of the software are detailed in the table below.

Clinic Module

Issue: Issue#	Issue: Primary Function	Issue: Detail	Issue: Resolution
Issue: Enhancements			
ENH-426	Risk Factors	Risk Factor 114 was incorrectly system assigned based on mother's current BMI	<ul style="list-style-type: none"> The system will automatically assign Risk Factor 114 for an infant less than 12 months when mother's BMI is greater than or equal to 30 at the time of conception or at any point during the first trimester. Risk factor can be manually assigned for all children when biological father is present and his current BMI is greater than or equal to 30 at time of certification.
ENH-474	Benefits Issuance	February benefits were not ending on the last day of February.	<ul style="list-style-type: none"> February benefits no longer go into March. Benefits for February will end on the last day of the month regardless of the printed first date to use.
Issue: Reported Issues			
TMP-048	Benefits Issuance	<p>The system is not correctly identifying that benefits have been issued through direct ship.</p> <p>This leads to repeated benefit issuance.</p>	The logic was updated to correct the defect, ensuring the appropriate flag is set so direct ship benefits are included when calculating future benefit dates.
TMP-118	On-Site	Toggle On-site was not working unless the participant was in a valid certification period.	<p>Multiple updates were made to this issue:</p> <ul style="list-style-type: none"> You are now able to toggle a participant on-site whether they are in a valid certification, pre-screened only, terminated or in Agency 88. The ability to select as many or as few members of a household as desired, by selecting a check box next to the individual's name. A master check box exists to select all in the list, or clear all in the list. Participant display filter criteria is updated to show any members from any agency, women (regardless of age or status), but not include 5-year-olds or children who are

			<p>categorically ineligible.</p> <ul style="list-style-type: none"> The person on whom the household search was executed is identified as the default, using a check box that is selected by the participant's name. You will see any alerts on the folder when you toggle a participant on-site. When issuing benefits from the Work with On-site group, benefits will be issued for all eligible members in the household regardless of if they show on the list or not.
TMP-132	Risk Factors	The system was not allowing Risk Factor 121 to be assigned to children ages 2-5. This was occurring on new certifications and pseudo certs. If it was previously assigned, the risk factor was being dropped and high risk was being removed from folder if that was the only high risk factor assigned.	The code to determine standing height for age was updated and calculations are now correct and risk factor is being assigned properly and is not dropping on pseudo certs.
TMP-135	Benefits Issuance	The systems was issuing an extra set of benefits for those participants who were already on month to month issuance and being recertified or were late pickups.	<ul style="list-style-type: none"> The system has been modified to only issue the appropriate benefits based on the issuance cycle selected for those participants who are currently month to month and being recertified or are late pick up. The above modification requires that for new participants, issue benefits must be done a second time to issue all benefits at certification. SEE SEPARATE DOCUMENT FOR INSTRUCTIONS FOR NEW CERTIFICATIONS
TMP-149	Risk factors	The system was incorrectly adding and dropping Risk factor 142.	The system was updated to auto assign risk factor when weeks gestation is less than or equal to 37 weeks and to not auto assign when weeks gestation is 37 weeks, 1 day and greater.
